

**ARE YOU
READY FOR
REPACK?**

SIX  **ARMS**

**AIRBORNE RADIO
MEASUREMENT SYSTEMS**

Do you know the performance of your antennas?

VERIFYING COVERAGE AND ANTENNA PERFORMANCE IS AN FCC REIMBURSABLE EXPENSE.

Sixarms is able to characterize your new and existing broadcast antenna systems with their innovative airborne measurement system (ARMS), we are able to fully diagnose and commission your REPACK transmission antenna infrastructure. This includes:

- // Complete 360° measurement data (horizontal and vertical pattern data)
- // Directly comparable to the antenna manufacturers design patterns
- // Lower measurement uncertainties and greater resolution of data
- // Traceable Calibration factors
- // Adjacent structure effects on your antenna pattern
- // Confirmation of correct system installation
- // Realtime results and timely decisions to help avoid costly returns to site
- // Automated reports

Why wouldn't you want peace of mind knowing that your valuable transmission infrastructure is operating at peak performance?

ABOUT US

SIXARMS is an innovative company that is using cutting edge unmanned aerial vehicle (i.e. drone) technologies to produce efficient, accurate and cost-effective measurement solutions within the broadcast, telecommunication and defense RF environments.
